

SPP Reduces Cluster Groups Down To (5) Regional Study Groups

The Southwest Power Pool Generation Interconnection Department has transitioned from the previous (18) Study Groups to (5) Regional Groups to aid in model management and study process workflow. To provide information continuity to the Interconnection Customers the tables below show the new Regional Groups that now populate the "Cluster Group" column in the SPP GI Queue table located at this URL: <https://opsportal.spp.org/Studies/GIActive>

Not all Generation Interconnection Requests have been populated, pending technical scoping call for upcoming Definitive Interconnection System Impact Study (DISIS) Clusters.

See representative grid map below. Note: It is not to scale and is offered only as a visual reference.
